DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claim 13 is rejected under 35 U.S.C. 103(a) as being unpatentable over Chen (5,778,747) in view of Meredith et al. (5,957,021), hereinafter Meredith.

Chen teaches a chop saw comprising a base assembly and a saw assembly attached to the base having an upper blade guard 84, a plate 88, a lower blade guard 142, a screw securing the plate 88 to the upper blade guard. See Fig. 1 and 3.

Chen does not teach a first tab. Meredith teaches a first tab 66a for forcing a user to withdraw a fastener a sufficient amount to allow a plate to be pivoted. See Fig. 12 and 13. Therefore, it would have been obvious to one skilled in the art to provide the plate in Meredith with a first tab for forcing a user to withdraw the fastener a sufficient amount to allow the plate to be pivoted as taught by Meredith.

Due to the small tolerance between the plate and the lower guard, as the screw is moved a second distance, the lower guard contacts the screw upon the rotation of the lower guard.

It is to be noted that the tab is provided at the right end for the plate 88 in Figs. 1 and 3 in Chen.

Allowable Subject Matter

Art Unit: 3724

3. Claims 14-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Response to Arguments

4. Applicant's arguments filed on 04/17/2007 have been fully considered but they are not persuasive.

The Applicant argues that the combination of Chen and Meridith does not teach that the lower blade guard contacts the screw upon the rotation of the lower blade guard after the screw has been moved to the second distance. This argument is not persuasive. It is well known in the art that the plate and the lower guard have a small tolerance. The lower blade guard slides on the plate. Therefore, when the screw is moved a second distance that is longer than the length of the tab, the screw interferes with the rotation of the lower blade guard.

Conclusion

5. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the

Art Unit: 3724

shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
